IDPH Reports 14 Illinois Counties at an Elevated Community Level for COVID-19

CHICAGO – The Illinois Department of Public Health (IDPH) announced today that the CDC is reporting 14 counties in the state are at a [Medium Community Level](#) for COVID-19 this week, compared to 13 a week ago. There are no counties at High Level for the third straight week.

IDPH has recorded a total of 4,116,356 cases and 36,648 deaths, in 102 counties in Illinois since the beginning of the pandemic. The department is reporting 7,195 new confirmed and probable cases of COVID-19 in Illinois in the week ending April 2, and 14 deaths.

“It continues to be welcome news that COVID-19 community levels are remaining low throughout most of Illinois,” said IDPH Director Dr. Sameer Vohra. “However, as spring arrives so does the potential for common springtime illnesses. As many families across Illinois come together to celebrate their faith traditions this weekend, as well as travel during spring break, let’s continue to practice good public health techniques to protect our family and friends who are most at risk of serious illness.”

The CDC [this week released data](#) indicating an increase in positive tests for common cold and stomach viruses in recent weeks including norovirus, respiratory adenovirus and human parainfluenza viruses. IDPH urges Illinoisans who are experiencing cold and stomach flu symptoms to take preventive measures if they are around friends and relatives who are vulnerable to severe health outcomes. These include proper hand hygiene, covering coughs and good ventilation.

IDPH urges the public to seek treatment for COVID-19 quickly if they test positive for COVID-19. Treatment is widely available and IDPH announced recently that SIU Medicine has made it easier to obtain care by offering a new [telehealth test to treat service](#) for COVID-19, in partnership with the department. The service is aimed at providing faster and easier access to treatment for Illinoisans who contract COVID-19. Those who test positive are encouraged to call 217-545-5100 from 7 a.m. to 8 p.m. Monday through Friday and 10 a.m. to 5 p.m. on Saturdays and Sundays to schedule a telehealth appointment to determine if medical treatment is recommended. Appointments will be offered on a first-come, first-serve basis.

Additional options for obtaining tests and treatments can be found at the following [test to treat site](#) or by contacting your provider for [treatment options](#), within 5 days of feeling ill.

IDPH is helping Illinoisans stay prepared for any future surge of COVID-19 cases by offering 1 million free COVID-19 rapid antigen tests to Illinois residents in all zip codes outside the City of Chicago through a partnership with the Rockefeller Foundation's public charity, RF Catalytic Capital and its Project ACT (Access COVID Tests) program.

Through Project ACT, IDPH is distributing up to one million at-home antigen tests to 200,000 Illinois households. You can request one package of five tests on a first-come-first-serve basis at the [Project ACT website](#). The tests will be delivered to the home address.

Free or low cost COVID-19 testing locations are also available throughout the state, including in Chicago, and can be found on the IDPH website's [testing locator page](#).

The CDC authorized two new bivalent booster vaccines on September 1 that include an mRNA component of the original strain to provide an immune response that is broadly protective against COVID-19 and an added mRNA component in common between the omicron variant BA.4 and BA.5 lineages to provide better protection against COVID-19 caused by the omicron variant.

Initially, the Moderna COVID-19 Vaccine, Bivalent, was authorized for use as a single booster dose in individuals 18 years of age and older and the Pfizer-BioNTech COVID-19 Vaccine, Bivalent, was authorized for use as a single booster dose in individuals 12 years of age and older. On October 12, the CDC authorized the updated COVID-19 vaccines from Pfizer-BioNTech for children ages 5 through 11 years, and from Moderna for children and adolescents ages 6 through 17 years.

On December 9, the CDC expanded its authorization for bivalent boosters to include children aged 6 months to 5 years. Children ages 6 months through 5 years who previously completed a Moderna primary series can now receive a Moderna bivalent booster 2 months after their final primary series dose. Children ages 6 months through 4 years who are completing a Pfizer primary series will receive a Pfizer bivalent vaccine as their third primary dose.

On March 14, the FDA expanded its authorization for bivalent boosters to include children aged 6 months to 4 years who had previously completed their entire Pfizer primary series with the monovalent vaccine. These children will now be able to receive the Pfizer bivalent vaccine as their booster, at least 2 months after completion of the primary series with the monovalent vaccine. The children in this age group who completed their Pfizer primary series with the bivalent booster as their 3rd dose (after December 2022) are not eligible for a booster dose of a bivalent vaccine at this time.

The updated boosters are available at pharmacies, hospitals, and other healthcare providers. The best way to locate a vaccine provider near you is to visit www.vaccines.gov and search for bivalent booster availability.

As of last night, 703 individuals in Illinois were reported to be in the hospital with COVID-19. Of those, 79 patients were in the ICU and 21 patients with COVID-19 were on ventilators. The preliminary seven-day statewide case rate is 57 COVID-19 cases per 100,000 Illinoisans.

In counties at the **Medium Community Level**, persons who are elderly or immunocompromised (at risk of severe outcomes) are advised to wear a mask in indoor public places. They should also get up to date on COVID-19 vaccines or get their bivalent booster, if eligible.

NEWS RELEASE

IDPH has been supporting pharmacies and healthcare providers in efforts to increase their inventories of the various FDA-authorized treatments. There are [over 1,200 treatment locations](#) in Illinois - including all the major retail pharmacies. More than 96.7% of the state's population is within a 10-mile radius of one of these locations.

A total of 26,114,025 vaccines have been administered in Illinois as of today. The seven-day rolling average of vaccines administered daily is 2,646 doses, including the bivalent booster and first doses. Since March 31, 18,521 vaccine doses were reported administered in Illinois. Of Illinois' total population, more than 79% have received at least one COVID-19 vaccine dose, more than 71% have completed their primary series of COVID-19 vaccines, and more than 19% have received the bivalent booster dose, according to [data from the Centers for Disease Control and Prevention](#).

Data indicates that the risk of hospitalization and severe outcomes from COVID-19 is much higher for unvaccinated people than for those who are up to date on their vaccinations. All data are provisional and are subject to change. Additional information and COVID-19 data can be found at <https://dph.illinois.gov/covid19.html>.

Vaccination is the key to ending this pandemic. To find a COVID-19 vaccination location near you, go to www.vaccines.gov. The federal government has established a new website that provides an all-purpose toolkit with information on how to obtain masks, treatment, vaccines and testing resources for all areas of the country at: <https://www.covid.gov/>.
