

Analysis on Potential Medicaid Eligible Clients

A list of 8,059 clients was sent to HFS in May 2018. Out of these, 97 were duplicates, which resulted in 7,962 distinct clients. Below is the analysis we did on those clients based on the information HFS sent back to us on the clients. There is some overlap in the categories below. If a client is in multiple categories, they are counted in the top most category listed below.

Distinct Clients	7,962
Deceased	486
Active Medicaid	402
Case Pending (61 of these were previously on Medicaid)	964
Previously on Medicaid (No application on file)	875
Previously on Medicaid (Application on File)	1,000
Last Application Denied Medicaid	296
Application Received, Application Status "Completed" (Client not active Medicaid)	244
No Information on Client	3,695

In total, 2,667 clients out of the 7,962 were previously on Medicaid, with only 1,464 showing as having an application on file, due to the transition to IES this past October. This leads us to believe that there may have been application on the 3,695 that were showing as no information, but with the change to IES, that information is no longer available. More collaboration with HFS will have to be done to work through this data in more detail.
