

## Appendix 1. Illinois Species in Greatest Conservation Need.

The criteria used to select Illinois SGNC were:

### Listed Species

- a) Threatened or endangered in Illinois, including federally listed species that occur within the State; S=State, F=Federal, T=Threatened, E=Endangered
- b) Species with a global conservation rank indicator of G1, G2, or G3

### Rare Populations

- a) Species that occur at a limited number of sites or have low population numbers

### Declining Populations

- a) Species that have declined in abundance or range since 2000, and declines are not part of a recognized population cycle

Vulnerable Habitat - Species is dependent upon a rare, declining, or vulnerable habitat for one or more life history needs (breeding, migration, wintering).

- a) Rare habitats: habitats with few occurrences or restricted distributions in Illinois that may impact the viability of species that depend on them
- b) Declining habitats: Acreage or overall quality of habitat has substantially declined
- c) Vulnerable habitats: Habitats most likely to be altered or degraded in the future

Vulnerable Characteristics - Species is vulnerable because it has a highly localized or restricted distribution (Endemics), or Illinois' population is disjunct from the rest of the species' range

NMI = Needs More Information before an assessment can be made
