

Green Roof or Rooftop Garden Plant List

Many commercial landscapers recommend succulents (mostly *Sedums*, which are non-native), because of the high rate of evaporation/transpiration on a rooftop due to sun and wind. Prairie plants for dry soil may also be used, especially those with shorter root systems. These plants are very well adapted to hot, windy, dry conditions (the prairie in August). On top of City Hall in Chicago (11 stories up) there are 20,000 plants of more than 100 species, including shrubs, vines and even two trees!
