Re: LPC#0390055036—DeWitt County
Clinton/Clinton Landfill #3
Compliance File

Dear Mr. Welk:

On April 16, 2013, an inspection of the above referenced site was conducted by Dustin Burger representing the Illinois Environmental Protection Agency. The purpose of this inspection was to determine the site's compliance with the Illinois Environmental Protection Act and 35 Illinois Administrative Code G regulations.

No violations were noted at the time of this inspection. For your information, a copy of the inspection report is enclosed.

Please contact Dustin Burger at (217) 278-5800 if you have any questions regarding this inspection.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul M. Purseglove".

Paul M. Purseglove, Manager
Field Operations Section

Narrative Inspection Report

I conducted a routine inspection at the above referenced facility on April 16, 2013. This inspection was conducted to determine the regulatory status and evaluate compliance with the Environmental Protection Act (Act) and Title 35 Illinois Administrative Code, Subtitle G: Land Pollution (Regulations). Mr. David Bryant, the Site Manager, accompanied me during the visit. Five photos were taken of Unit #3. The weather was cloudy and very wet, with temperatures in the 50s. The area had received approximately six inches of rain in the last two weeks. Several days had also seen 25-35mph winds.

Site Inspection

When I arrived at the landfill I met Dave Bryant, the landfill manager, at the office and we drove out to Unit #3. We drove to the active area located in cell 3B and watched as several trucks unloaded (photo 1). The winds were calm today, so blowing litter was not an issue. I did note one tire on the edge of the active area. Bryant radioed the operator to move the tire so it could be placed in a roll-off for disposal at a tire handling facility. The operator got out of his machine and placed the tire out of the way. Since it was extremely wet with torrential rains and flooding during the previous week, a rear loading packer truck became stuck at active face. I bulldozer used a chain to pull the vehicle to more stable footing so it could leave.

The northern edge of the landfill area has 30-foot tall telephone poles with netting installed to prevent litter from blowing into the sedimentation pond where it is harder to remove. I did not note any litter in the pond, but the treeline had several pieces of plastic bags lodged in their branches from the high winds the previous week (photo5). Bryant said he normally rents a man-lift to remove the material, but the two weeks of rain and 12 inches snow prior has made it difficult to get the equipment to the area. The litter in the trees was not excessive, but I noted it should be removed when it can be accessed.

Construction of cell 5A is now complete. The cell had been excavated and the recompacted clay liner and HDPE liners installed (photo 4). The facility has completed the installation of the sand drainage layer to the bottom of the cell and installed the leachate drainage system. The leachate collection system was in operation and was being used to pump stormwater from the empty cell to the eastern ditch that leads to the

northern detention basin. As part of the construction, the temporary wells on the south side of the active area were removed and replaced. The new wells were installed in time to take the required 4th quarter groundwater samples. A draft denial was issued for the Construction Quality Assurance report and Operational Permit request for Cell 5A. CLI responded with additional information, but the operational permit has not yet been issued.

The Chemical Waste Unit(CWU) was receiving waste from a Manufactured Gas Plant (MGP) site in Rockford the day of the inspection. I took two photos of the CWU (photos 2-3). Thus far no waste has been placed in the eastern half, but a soil and cover has been placed to protect the liner from freezing and UV damage. The landfill has received a permit allowing, and is now using a plastic covering over the areas not used to keep stormwater from contacting the waste or entering the leachate collection system. The stormwater would then not have to be handled as leachate. Currently the landfill is not solidifying the leachate from the CWU, finding it was taking up too much airspace. The leachate is instead hauled to Peoria Disposal Company(PDC) #1 for treatment in their wastewater treatment facility.. Currently, the tank has 8.5 feet of leachate in a tank designed to hold 11 feet. Two truckloads of leachate per day are being hauled to the Treatment, Storage or Disposal (TSD) facility due to the recent heavy rains.

The landfill has six gas collection wells and leased a small flare for gas management on Unit #3. The flare was operating normally during the inspection.

Permitting

The facility is operating under permit 2005-070-LF, which expires on February 15, 2017. The permit renewal application was granted in Modification 29 on July 7, 2012. The permit includes a 157.451 acre waste disposal area with a gross airspace of 32,014,225 cubic yards. At current waste disposal rates, the space is estimated to last 45 years.

Permit Modification 35 was granted on January 24, 2013, which approved the construction and operation of the Phase 1 landfill gas management system.

Permit modification 36 issued on March 1, 2013 modified the facility groundwater sampling plan. The permit allows separate samples for the CWU and MSW units.

Permit Modification 37 issued on April 18, 2013 designates G02R, G04R, G07R, R17R, and R58R as upgradient wells, returned them to routine monitoring, and allows a proposal to submit new interwell values after new groundwater sampling data is collected.

Total closure costs are estimated at the end of its operating life is \$11,931,943. The estimate for closure of the current landfill is \$8,586,886. This value has risen with the opening of additional phases of the landfill.

Records Review

The facility has 60 groundwater monitoring wells installed. Fifteen upgradient and 45 downgradient wells monitor the four groundwater zones beneath the landfill. Confirmed exceedences for the last quarter were noted in five wells in a January 23, 2013 submittal. All of the exceedences were in common inorganics such as dissolved sulfates (five wells) and zinc (well G09D), and none were of non-naturally occurring constituents. The landfill will have to submit a significant permit modification within 180 days to demonstrate whether the increases are attributable to the facility.

The landfill disposes of leachate in one of three ways. First, the liquids can be recirculated. In 2012 a total of 4,006,042 gallons have been recirculated in Unit #2. Unit #3 does not yet have a recirculation systems installed. Second, leachate and LFG condensate can be solidified with ash and disposed as solid waste. A total of 60,200 gallons from Unit 1, 657,500 gallons from Unit 2, and 1,632,000 gallons from MSW Unit 3 have been solidified on-site and placed in the landfill. Thirdly, leachate can be hauled off site for disposal. A total of 610,000 gallons from Unit 3 MSW, and 785,000 gallons from the CWU have been hauled off-site for disposal. MSW leachate from Units 2 and 3 is hauled to Bloomington-Normal Water Reclamation District, while the CWU leachate is manifested to Peoria Disposal Company's PDC #1 wastewater plant where it is pre-treated and discharged to the Peoria Sanitary District.

Summary of Apparent Violations

No violations were noted during the inspection
