

# **State of Illinois Public Water Supplies Annual Compliance Report Calendar Year 2002**

The purpose of this report is to satisfy the requirement of Section 1414(c)(3) of the 1996 Amendments to the Safe Drinking Water Act (SDWA). States with national primary enforcement authority are to prepare, make readily available to the public, and submit to the Administrator of the United States Environmental Protection Agency (USEPA) by July 1 of each year, an annual report on violations occurring during the previous calendar year of national primary drinking water regulations by public water systems (PWSs) in Illinois. Attached is the Annual Compliance Report for Calendar Year 2002 (CY02).

Attached to this report as Appendix A is a listing for each contaminant regulated by the SDWA, the numbers of maximum contaminant level (MCL), treatment technique (TT) and major monitoring and reporting (M/R) violations for each compliance period during CY02 and the number of systems incurring violations. Appendix B is a detailed listing of the MCL and TT violations.

In Illinois, oversight of PWSs is divided between the Illinois Environmental Protection Agency (Illinois EPA) and the Illinois Department of Public Health (Illinois DPH). Illinois EPA has been designated as the lead agency for primary enforcement authority and oversees the community water supply program (those supplies that serve 25 or more year round residents). Illinois DPH oversees the non-transient, noncommunity water supplies (NTNC) that serve 25 or more of the same nonresidents at least 60 days out of the year and include facilities such as day care centers, schools and factories. Illinois DPH also oversees the transient non-community (TNC) water supplies that serve 25 or more different nonresidents at least 60 days out of the year and include facilities such as campgrounds and highway rest areas.

The Illinois Safe Drinking Water Goal is for every Illinois Public Water system to provide water that is consistently safe to drink. As a part of the its partnership agreement with USEPA, Illinois EPA measures the environment progress of the drinking water program with environmental indicators consisting of the percentage of persons served by community water supplies that have not incurred violations of any acute MCL, chronic MCL, acute treatment technique, chronic treatment technique or health advisory during the year for drinking water standards that have been in effect for more than three years. The environmental objective of the Illinois EPA is to increase the percentage of population served by community water supplies that receives drinking water with no short-term (acute) or long-term (chronic) adverse health effects to over 95 percent by the year 2005. The progress towards this objective is summarized on the following pages.

**Goal:** Every Illinois Public Water Supply will provide water that is consistently safe to drink.

**Objective:** The percentage of the population served by community water supplies receiving drinking water with no short-term (acute) or long-term (chronic) adverse health effects will increase to over 95 percent by the year 2005

**Persons Served by Compliant Water Supplies**

Safe drinking water should be free of contaminants that have the potential to cause either short term or long-term health effects. During calendar year 2002, the percentage of persons served by Illinois community water supplies that were compliant with all health requirements (maximum contaminant levels, treatment techniques, or health advisories that have been in effect for more than three years) was 93 percent. Community Water Supplies compliant with health requirements as provided in **Figure 1** illustrates progress toward the Year 2005 objective as Percent Population Served. The 2002 compliance percentage is over a 4 percent improvement in compliance from calendar year 1995. Compliance efforts will continue to focus on minimizing the frequency and duration of excursions and the development of enforceable schedules for the implementation of corrective action plans to achieve sustained compliance.

**Figure 1**

The number of water supplies in full compliance with all health requirements during 2002 was 1,644, or 90 percent, of the community water supplies in Illinois.

### Persons Served by Compliant Water Supplies

During calendar year 2002, the percentage of persons served by Illinois community water supplies that were compliant with all health requirements was 93 percent. This compliance percentage represents over a 4 percent improvement from calendar year 1995 and reflects continued progress toward the calendar year 2005 goal of 95 percent. It is important that safe drinking water be free of contamination that has the potential to cause either short-term or long-term health effects. The compliance outcome is significant because a total of 10,603,318 persons in Illinois were provided safe drinking water from water supplies compliant with all health requirements during 2002. This represents an additional 797,873 persons served by compliant water supplies when compared to 1995.

**Figure 2** shows that 98.4 percent of the population served by Illinois community water supplies received drinking water in compliance with acute (short-term) health requirements, and 94.6 percent were in compliance with chronic (long-term) health requirements. It is important to note that most non-compliance was short in duration, and the potential for health risk was minimized through prompt corrective action by the water supplies. Supplies with microbial problems (bacterial or turbidity non-compliance) are required to issue boil orders. Supplies exceeding the nitrate maximum contaminant level are required to provide bottled water for infants until the levels are consistently well below the maximum contaminant level.

**Figure 2**

### Acute and Chronic Requirements (2002 data) Percent of Population Served Compliant with Health Records

ACUTE

■ Compliant ■ Non-compliant

CHRONIC

■ Compliant ■ Non-Compliant

### Lead and Copper Rule Compliance

The lead action level (15 parts per billion of lead) when exceeded in more than 10 percent of the water samples collected in consumers homes, requires the water supply to implement a treatment technique or enforceable procedure which would prevent anticipated adverse health effects and ensure that lead or copper is controlled in the drinking water.

In 2002, 1,789 water supplies, or approximately 98 percent of community water supplies, were below the lead action level. These water supplies serve 99 percent of the population.

Generally, non-compliance is for a short period of time because the treatment is quickly adjusted to required ranges.

### Variations and Exemptions

A variance or exemption is state or USEPA permission not to meet an MCL or a treatment technique under certain conditions for a period of time. In most cases, a variance is granted to give a water system additional time to make complicated and expensive modifications and improvements to the water treatment process so that compliance maybe achieved in the shortest period of time. During 2002, the Illinois Pollution Control Board (IPCB) granted six water systems variances from certain requirements of the Interim Enhanced Surface Water Treatment Rule.

<b>Water System</b>	<b>Duration of Variance</b>	<b>Variance/Requirement</b>
Chicago	10/8/01 through 01/01/03	Continuous Individual Filter Monitoring (611.744) and Turbidity Monitoring Reporting (611.745)
Centralia	03/21/02 through 07/01/03	Turbidity 0.3 NTU Requirement (611.743), Continuous Individual Filter Monitoring (611.744), and Turbidity Monitoring Reporting (611.745)
Carlyle	11/7/02 through 01/01/03	Turbidity 0.3 NTU Requirement (611.743), Continuous Individual Filter Monitoring (611.744), and Turbidity Monitoring Reporting (611.745)
Salem	03/21/02 through 05/01/03	Continuous Individual Filter Monitoring (611.744) and Turbidity Monitoring Reporting (611.745)
Canton	4/4/02 through 11/30/02	Turbidity 0.3 NTU Requirement (611.743), Continuous Individual Filter Monitoring (611.744), and Turbidity Monitoring Reporting (611.745)
Charleston	12/31/01 through 12/30/03	Turbidity 0.3 NTU Requirement (611.743)

\*Note: Although a PWS may be out of compliance with more than one contaminant or violation type, when calculating totals, it's counted no more than once within the population being totaled. So, the sum of NUMBER OF PWSs IN VIOLATION, over the various violation types or contaminants, may not add up to the total.

## **Appendix A**

The attached tables summarize the number of maximum contaminant level, treatment technique, and significant monitoring violations that occurred during calendar year 2002 for each contaminant regulated by the Safe Drinking Water Act (SDWA). Also identified is the number of public water supplies responsible for the violations and the number of violations that have returned to compliance.
