IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

The IEPA should hold public hearings so all stakeholders have a chance to weigh in. We need a hearing here in Lake County so people who can not travel far would be able to participate.

Some of the plans for the settlement funds should be specifically designated for environmental justice issues. Some low income communities may not be able to afford matching grant requirements, but opportunities should still be made available to these communities. Waukegan and Zion in Lake County have many needs but lack resources.

Particularly since we are nonattainment, Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

It is great that electric school buses will receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Additionally, as a Naperville resident which is a municipal electricity provider under contract with IMEA, making us ineligible for any renewable funding through the new Future Energy Jobs Act, I would like to have the opportunity to propose that some of the Volkswagen funding be utilized for municipal and rural co-op electric providers.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

I urge you to take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to afford the matching grant requirements, but opportunities including education on the issue, should be made available to these communities. This is the right thing to do.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities. Environmental justice communities are struggling with systemic racism and, through no fault of their own, are forced to live in conditions and circumstances that adversely affect their quality of life.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

Subject: [External] Public comment to the IEPA regarding the VW settlement

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

I purchased an electric vehicle to use in Jo Daviess County. Unfortunately, there is NO charging infrastructure in the entire northern region of Illinois. There is a public charger in Rockford, and nothing west of there until you get to the Galena City Hall, 100 miles away. There isn't a single charger in the entire Freeport area, although if you drive to Dubuque, their public parking garages are fitted out with public chargers.

Don't let NW Illinois miss out on this important new form of transportation. Make sure we have the infrastructure to support local residents and tourists who visit our area.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA should hold public hearings and provide additional time for public comment.

IEPA should dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to affording the matching grant requirements, but opportunities should still be made available to these communities.

Illinois should take the opportunity to carve out up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jump start the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. This should be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding should be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.

IEPA VW Settlement,

Dear IEPA,

Thank you for the opportunity to provide public comment concerning the VW settlement funds allocated to Illinois.

Take time to involve all the stakeholders. Other states have participated in a lengthy public stakeholder process, but Illinois has only provided six weeks for interested members of the public to weigh in. IEPA could hold public hearings and provide additional time for public comment.

IEPA could also dedicate a portion of this plan to better assisting environmental justice communities. Some low income communities may not be able to afford the matching grant requirements, but opportunities could still be made available to these communities.

Finally, Illinois could take the opportunity to earmark up to 15% of the funding for electric vehicle infrastructure. Immediately electrifying the transportation sector should be a top priority to reduce air and carbon emissions in Illinois and jumpstart the benefits of a zero emission transportation sector.

I am excited to see electric school buses receive 10% of the funding. My hope is this will be maintained and increased, with provisions to provide additional assistance to low income and environmental justice communities.

The remaining funding could be used on the electrification of the transportation sector. IEPA should restrict funding for "clean" diesel and also prohibit natural gas from fracking as a potential recipient of grant funds.

Thank you for your consideration.
