Pre-operational Inspection Report

I conducted a routine inspection at the above referenced facility on December 7, 2015. This inspection was conducted to determine whether the construction detailed in Permit Log 2015-565 had been completed. Four photos were taken. The weather was extremely foggy, with temperatures in the 50s. No violations were found.

Site Inspection

When I arrived at the landfill I checked in at the landfill office. Mr. Bryant was on vacation, but Kyle was on-site. I drove around for a short time, but could not find him at the landfill site in the heavy fog.

The inspection was limited to the items detailed in the Construction Quality Assurance (CQA), report designated Log 2015-565. The project involved the installation of landfill gas piping to bring gas generated from Unit 3 to the gas-to-energy plant located northwest of Unit #2. Currently, landfill gas generated from Unit 3 is being piped to a small flare located on the northeast side of Unit 3. As the generation of gas from Unit 2 slows, the addition of the gas from Unit 3 will still allow the generating plant to operate.

I had observed the installation of parts of the gas line during previous inspections. During my previous inspection in October, the actual piping had been installed, and an electrician was working on the above-ground flow meter located at the northeast corner of Unit 2.

The piping begins at the northwest corner of Unit 3, where it is connected to the gas wells dotted over unit 3. The gas line goes under the access road between Units 2 and 3 to an eight foot, above-ground flow meter. The line then goes underground along the north side of Unit 2, before being hooked into the existing gas handling equipment on the northwest side of Unit 2. At this location are the condensate knock-out equipment and tanks, and two back-up flares. The gas can be directed to the nearby gas-to-energy plant for use to generate electricity, or can be burned in the flares if the plant is down for maintenance.

Clinton/Clinton Landfill #3

All the equipment and gas lines appear to have been installed and are working properly.
FOS recommends the permit be issued for the operation of the system.
