Peoria, Illinois 61615-3647

Re: LPC#0390055036—DeWitt County  
Clinton/Clinton Landfill #3  
Compliance File

Dear Mr. Welk:

On November 28, 2016 an inspection of the above referenced site was conducted by Dustin Burger representing the Illinois Environmental Protection Agency. The purpose of this inspection was to determine the site's compliance with the Illinois Environmental Protection Act and 35 Illinois Administrative Code G regulations.

No violations were noted during this inspection.

For your information, a copy of the inspection report is enclosed. Please contact Dustin Burger at (217) 278-5800 if you have any questions regarding this inspection.

Sincerely,

A handwritten signature in black ink that reads "John P. Richardson".

John P. Richardson, Acting Manager  
Field Operations Section  
Bureau of Land

November 28, 2016 Inspection  
Inspector: Dustin Burger  
GIS Information from BOL Inventory: N40.11507 W-88.9589

**Narrative Inspection Report**

I conducted a routine solid waste inspection at the above referenced facility on November 28, 2016. This inspection was conducted to determine the regulatory status and evaluate compliance with the Environmental Protection Act (Act) and Title 35 Illinois Administrative Code, Subtitle G: Land Pollution (Regulations). Dave Bryant, the Site Manager accompanied me during the visit. Five photos were taken. There was a driving rain falling, powered by 15-25 mph winds from the south. It had rained the entire night before the inspection.

**Site Inspection**

When I arrived at the landfill I checked in at the landfill office. Mr. Bryant was out on the landfill, and I found him as he was driving back in his ATV. He escorted me during our inspection. The scalehouse was busy, with 8 trucks waiting for the scales as we drove past.

We started the inspection at the Chemical Waste Unit. The area was open and several trucks were busy dumping in the area. Mr. Bryant said the landfill has been receiving 12-15 trucks per day of contaminated soil from a former railroad tie treatment site in Sauget, Illinois. The soil was permitted for any municipal landfill, but the parties involved in the remediation chose Clinton Landfill's Chemical Waste Unit because of the additional protection it offers from future liability. The CWU still is receiving bed ash, as well as a salt waste and spent bleaching clay.

The main roads at the facility were in good shape, but some of the dirt access roads around the south sides were muddy enough I did not think my truck could access them. I could see parts of the south sedimentation pond from the CWU access road, and could see that it still had at least 6 feet of freeboard available.

We also looked at the waste solidification unit located on top of Cell 1C, which was not active during my inspection. Section V.B of Clinton Landfill's permit authorizes the facility to solidify liquid waste. The waste includes industrial wastes and sludges, as well as leachate generated from the landfill's Municipal Solid Waste (MSW) unit. The liquid waste is discharged into a steel railcar buried in the cover on top of the landfill over

previously deposited waste. Bottom ash is stored in a large temporary tent and is added to the liquid waste and mixed with a trackhoe to solidify the material until the resultant mixture passes the paint filter test. The liquid/ash mixture is then placed in the active fill.

We then drove the perimeter of the landfill, looking for any errant litter. The east side of the landfill is composed of a dirt road, and it was muddy enough in the rain I was concerned about getting stuck or sliding off the road. Minor amounts of litter were present on the north side of the landfill, but it was not excessive even in the high winds. Mr. Bryant said it would be picked up as normal at the end of the day.

We then drove to the municipal solid waste unit (MSW) which was very active. No banned wastes were noted as we stopped for a time to watch incoming loads from the east and south sides.

I visited the scalehouse to look at waste shipment documentation. The landfill noted the GPS coordinates and elevation of each asbestos load in the logbook.

Special wastes received recently included:

1. Oily sludge from CNH
2. Spent lapping compound from Caterpillar's Mapleton Facility
3. Gas condensate and leachate from Clinton Landfill's units #1 and #2
4. Filter cake from Depue
5. Foundry Dust from Mueller in Decatur
6. Foundry sand from Mueller
7. Alcohol Catalyst from Equistar
8. Waste from remediation project at Moss American/Tronox in Sauget, Illinois.

The only new wastes noted were soils and liquids from the remediation project in Sauget, Illinois. I looked at the waste profile for this material, which indicated the waste had 0.13 parts per million of two of the cresol isomers (m-cresol, p-cresol). The limit the concentration must exceed to be considered a hazardous waste is 200 ppm.

The gas system was operating normally. The gas-to-energy plant was operating normally, and a flare was operating to burn gas in excess of the plant's capacity. The landfill generates approximately 1500 cubic feet per minute of landfill gas.

Leachate from Unit #3 is collected from the leachate collection system and is pumped into a 30,000 gallon, double-walled underground tank north of Unit #3. Leachate from the MSW unit is recirculated, hauled to the Bloomington-Normal Water Reclamation District, or solidified on-site.

## **Permitting**

The facility is operating under permit 2005-070-LF, which expires on February 15, 2017. The permit renewal application was granted in Modification 29 on July 7, 2012. The

permit includes a 157.451 acre waste disposal area with a gross airspace of 32,014,225 cubic yards. At current waste disposal rates, the space is estimated to last 45 years.

Modification 62 issued on September 15, 2016 approved the following:

1. The operator's demonstration of compliance with Condition IX13 of permit modification 61, which required the submittal of a landfill gas assessment report.
2. The proposed assessment monitoring activities to address landfill gas exceedances in probes PGP-2, PGP-3 and PGP-16.
3. Resumption of annual monitoring at gas probe PGP-8
4. Changes to the permit condition to bring them in line with the agreements documented in the November 12, 2016 Consent Order No. 15-CH-46.
5. Annual update to the closure and post-closure cost estimates.

Modification 63, issued on November 16, 2016 approved the following:

1. Alternate source demonstration for 1<sup>st</sup> quarter 2016 groundwater exceedances.
2. Establishment of intrawell AGQS values for select parameters.
3. Assessment monitoring at well G09D
4. Construction documentation for four leachate re-circulation wells designated as LRW-130. LRW-136. LRW-167, and LRW-168.
5. Construction acceptance report for several landfill gas collection pipes.

The estimate for closure of the current landfill's 39.8 acres of municipal solid waste disposal and 6.14 acres comprising the CWU is \$11,478,077. This value includes \$5,564,186 for premature closure, and \$5,913,891 for post-closure care. Financial assurance is in the form of a trust fund.

## **Groundwater**

The latest groundwater submittal was received on July 11, 2016. The Notice of Exceedence after re-sample for exceedances noted during the second quarter of 2016. The report notes exceedances in the following wells that are not already addressed by previous permit submittals:

G09R-Dissolved Nitrate  
G27R-Specific Conductance, Total Dissolved Solids

The landfill is required to submit a permit application to address the exceedances when they are confirmed by this re-sample event. This is the last groundwater information available in the Agency's file system.

## **Summary of Apparent Violations**

No violations were noted.

Notes:

1. # denotes an Upgradient Well
2. AGQS: Applicable Groundwater Quality Standard/MAPC: Maximum Allowable Predicted Concentration
3. dissolved = filtered sample, total = unfiltered sample; mg/L = Milligrams per liter = parts per million (ppm), µg/L = Micrograms per liter = parts per billion (ppb), µmhos/cm = micromhos/centimeter, s.u. = standard units.
4. **BOLD** indicates that the result qualifies as an exceedance, as defined by the Facility permit.

Permit needed.

Log 2016-144

1st Q

**TABLE 1**  
**Clinton Landfill No. 3**  
**Confirmation Results for 2<sup>nd</sup> Quarter 2016**

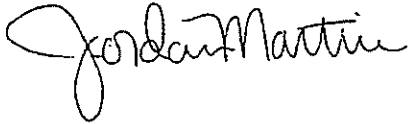

Well	Parameter	Units	Initial Result	Interwell AGQS/ MAPC	Intrawell AGQS	Resample Result
<b>ROXANA SILT-ROBEIN MEMBER WELLS</b>						
G09R	Nitrate-N, dissolved	mg/L	<b>0.08</b>	0.06	NE	<b>0.22</b>
G27R	Specific Conductance, field	µmhos/cm	<b>1818</b>	1543	NE	<b>1868</b>
	Total Dissolved Solids	mg/L	<b>1100</b>	1064	NE	<b>1200</b>
G47R	Nitrate-N, dissolved	mg/L	<b>0.16</b>	0.06	NE	< 0.02
G49R	Arsenic, dissolved	µg/L	<b>13</b>	11	NE	9.5
	Magnesium, dissolved	mg/L	<b>120</b>	114	NE	88
G58R	Nitrate-N, dissolved	mg/L	<b>0.33</b>	0.06	NE	< 0.02

Notes:

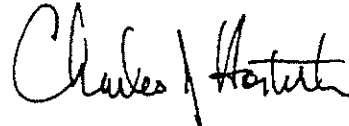

1. # denotes an Upgradient Well
2. AGQS: Applicable Groundwater Quality Standard/MAPC: Maximum Allowable Predicted Concentration
3. dissolved = filtered sample, total = unfiltered sample; mg/L = Milligrams per liter = parts per million (ppm), µg/L = Micrograms per liter = parts per billion (ppb), µmhos/cm = micromhos/centimeter, s.u. = standard units.
4. **BOLD** indicates that the result qualifies as an exceedance, as defined by the Facility permit.

Please contact either of the undersigned if you have any questions or need additional information.

Sincerely,
