Re: LPC#0390055036—DeWitt County
Clinton/Clinton Landfill #3
Compliance File

Dear Mr. Welk:

On February 16, 2017 an inspection of the above referenced site was conducted by Dustin Burger representing the Illinois Environmental Protection Agency. The purpose of this inspection was to determine the site's compliance with the Illinois Environmental Protection Act and 35 Illinois Administrative Code G regulations.

No violations were noted during this inspection.

For your information, a copy of the inspection report is enclosed. Please contact Dustin Burger at (217) 278-5800 if you have any questions regarding this inspection.

Sincerely,

A handwritten signature in black ink that reads "John P. Richardson".

John P. Richardson, Acting Manager
Field Operations Section
Bureau of Land

Enclosure

Narrative Inspection Report

I conducted a routine solid waste inspection at the above referenced facility on February 16, 2017. This inspection was conducted to determine the regulatory status and evaluate compliance with the Environmental Protection Act (Act) and Title 35 Illinois Administrative Code, Subtitle G: Land Pollution (Regulations). Kyle Martin accompanied me during the visit. Seven photos were taken. The weather was unseasonably warm, with temperatures in the 60s, mostly sunny skies, and moderate south wind.

Site Inspection

When I arrived at the landfill I checked in at the landfill office. Mr. Bryant was in a meeting with managers from the company's Peoria Headquarters, so Kyle Martin accompanied me on the inspection.

We started at the waste solidification unit located on top of Cell 1C, which was not active during my inspection (photo 1). Section V.B of Clinton Landfill's permit authorizes the facility to solidify liquid waste. The waste includes industrial wastes and sludges, as well as leachate generated from the landfill's Municipal Solid Waste (MSW) unit. The liquid waste is discharged into one of two steel railcars buried in the cover on top of the landfill over previously deposited waste. Bottom ash is stored in a large temporary tent and is added to the liquid waste and mixed with a trackhoe to solidify the material until the resultant mixture passes the paint filter test. The liquid/ash mixture is then placed in the active fill.

We then drove the northern and eastern perimeter of the landfill, looking for any errant litter. The east side of the landfill is composed of a dirt road, and did not give access to the active area or southern areas of the landfill. I took a photo of the currently filled areas 1, 3, and 5 (photo 4). The cells on the west side of the landfill have odd numbers, while the future cells on the east side of unit three will be designated with even numbers. The area between Cell 5 and the Chemical Waste Unit on the south side was being excavated for a new cell (photo 3).

We then drove to the municipal solid waste unit (MSW) active area. We watched several trucks dump at the active face. The traffic was steady, but there were no waiting disposal trucks. No banned wastes were noted in the wastes deposited.

We then visited the Chemical Waste Unit. The area was open and several trucks were busy dumping in the area. The CWU still is receiving bed ash, as well as a salt waste and spent bleaching clay. The access road into the CWU had been relocated to make room for a future stormwater pond as cell 7 is constructed to the north.

The south sedimentation pond had plenty of room for additional stormwater (photo 7).

I visited the scalehouse to look at waste shipment documentation. The landfill noted the GPS coordinates and elevation of each asbestos load in the logbook. Asbestos was received from the University of Illinois, State Farm in Bloomington, and Tate & Lyle in Decatur.

Special wastes received recently included:

1. Spent lapping compound from Caterpillar's Mapleton Facility
2. Gas condensate and leachate from Clinton Landfill's units #1 and #2
3. Filter cake from Depue
4. Foundry Dust from Mueller in Decatur
5. Foundry sand from Mueller

The gas system was operating normally. The gas-to-energy plant was operating, and a flare was operating to burn gas in excess of the plant's capacity. The landfill generates approximately 1500 cubic feet per minute of landfill gas, with the flare currently burning approximately 400 cubic feet per minute.

Leachate from Unit #3 is collected from the leachate collection system and is pumped into a 30,000 gallon, double-walled underground tank north of Unit #3. Leachate from the MSW unit is recirculated, hauled to the Bloomington-Normal Water Reclamation District, or solidified on-site. For 2016, a total of 15,000 gallons of leachate from Unit 3 were solidified. A total of 769,958 gallons were recirculated back into Unit 3, and 321,500 gallons of leachate from the CWU were hauled for off-site disposal.

Permitting

The facility is operating under permit 2005-070-LF, which expired on February 15, 2017. The permit renewal application was received on November 10, 2016. The permit renewal has been challenged by a local group based on the designation of the Mahomet Aquifer as a sole-source aquifer. The permit includes a 157.451 acre waste disposal area with a gross airspace of 32,014,225 cubic yards. At current waste disposal rates, the space is estimated to last 45 years.

Modification 64, issued on December 14, 2016 approved the construction report for the installation of the 12" clay layer in the Chemical Waste Unit.

Modification 65, issued on January 3, 2017 approved the following:

1. Alternate source demonstration for 2nd quarter 2016 groundwater exceedances.
2. Establishment of intrawell AGQS values for select parameters.

The estimate for closure of the current landfill's 39.8 acres of municipal solid waste disposal and 6.14 acres comprising the CWU is \$11,478,077. This value includes \$5,564,186 for premature closure, and \$5,913,891 for post-closure care. Financial assurance is in the form of a trust fund.

Groundwater

The latest groundwater submittal on file was received on December 29, 2016 for exceedances noted during the fourth quarter of 2016. The report notes exceedances in a chart attached to this report.

The landfill is required to submit a permit application to address the exceedances when they are confirmed by this re-sample event. This is the last groundwater information available in the Agency's file system.

Summary of Apparent Violations

No violations were noted.
