# Illinois Landfill Disposal Capacity Report

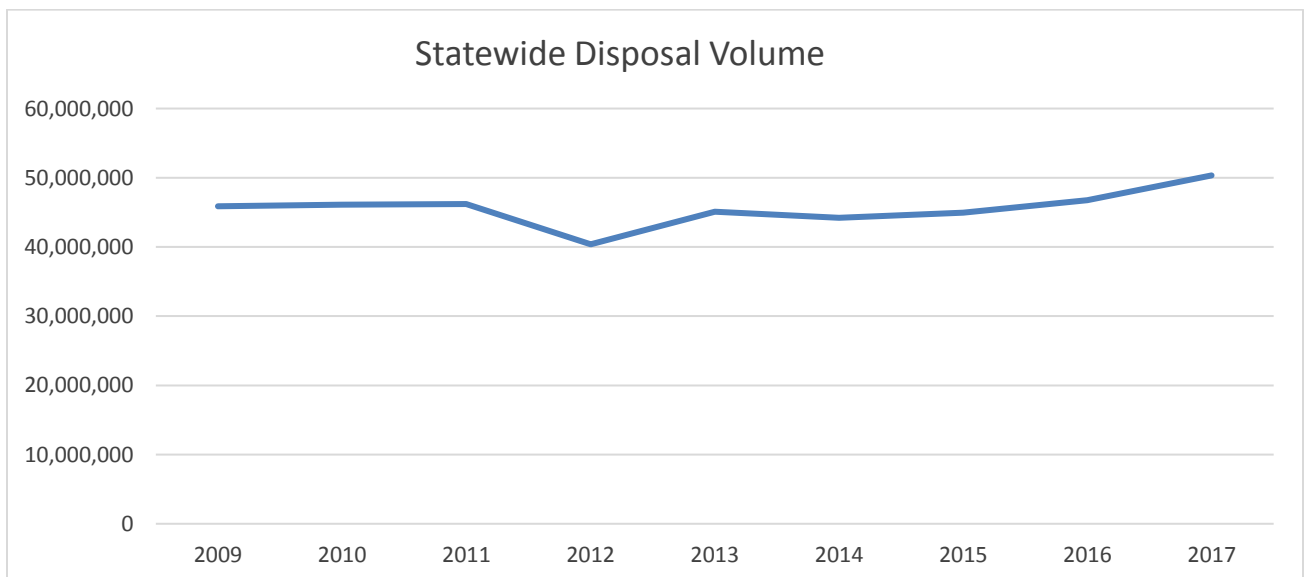

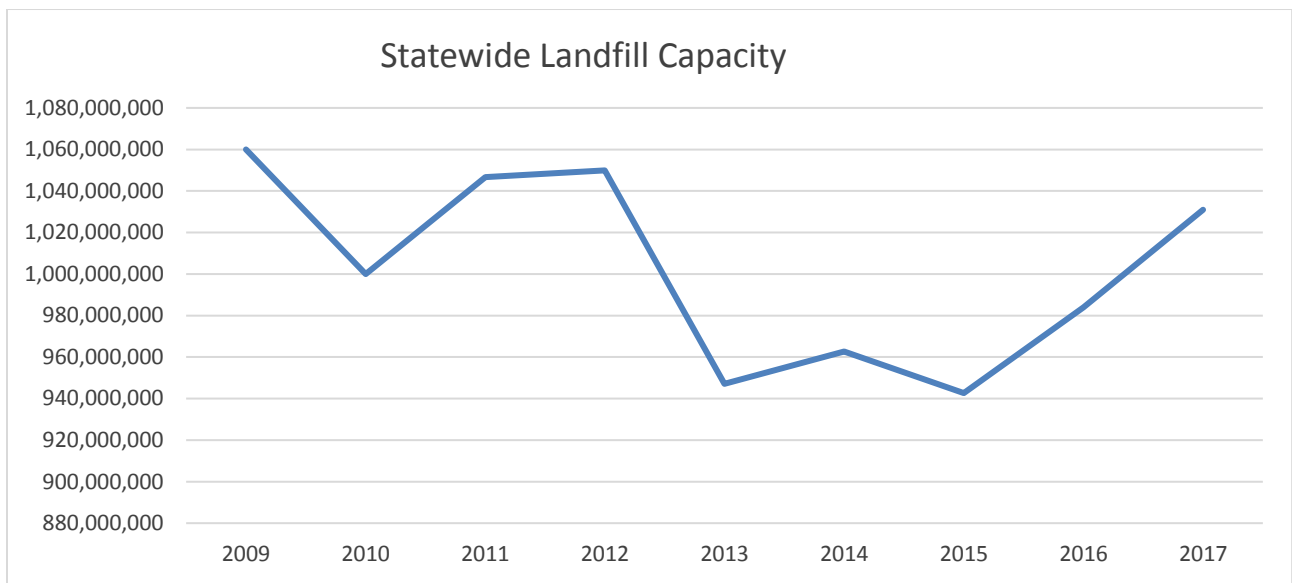

July 2018

## Introduction

Pursuant to Section 4 of the Illinois Solid Waste Management Act, the Illinois Environmental Protection Agency (Illinois EPA) has prepared this report reflecting the available disposal capacity of permitted landfills and the estimated life expectancy of those landfills. This report identifies the cumulative remaining disposal capacity and landfill life expectancy for the state as a whole, each of the seven administrative regions of the state, and each active permitted landfill. Under Sections 22.15 and 22.44 of the Illinois Environmental Protection Act, each permitted solid waste landfill is required to report to the Illinois EPA the volume of solid waste accepted during the calendar year and the remaining disposal capacity as of January 1 of the following calendar year. For this report, the projected life expectancy of each landfill is determined by dividing the remaining disposal capacity of the landfill on January 1, 2018, by the landfill's disposal rate during calendar year 2017.

# Statewide Disposal Capacity

During calendar year 2017, 37 permitted landfills in Illinois reported receiving a total of 50,334,563 cubic yards of solid waste. These landfills have a remaining combined available disposal capacity of 1,030,975,772 cubic yards. At the current disposal rate, these landfills will have a cumulative life expectancy of approximately 20 years. However, landfill capacity and life expectancy may vary year-to-year based on a number of factors, including waste disposal rates, landfill expansion, and the construction of new landfills. Since 2009, seventeen permit modifications have resulted in the cumulative addition of approximately 200,000,000 cubic yards of landfill capacity statewide. Below are charts reflecting statewide landfill capacity and disposal rates, in cubic yards, since 2009.

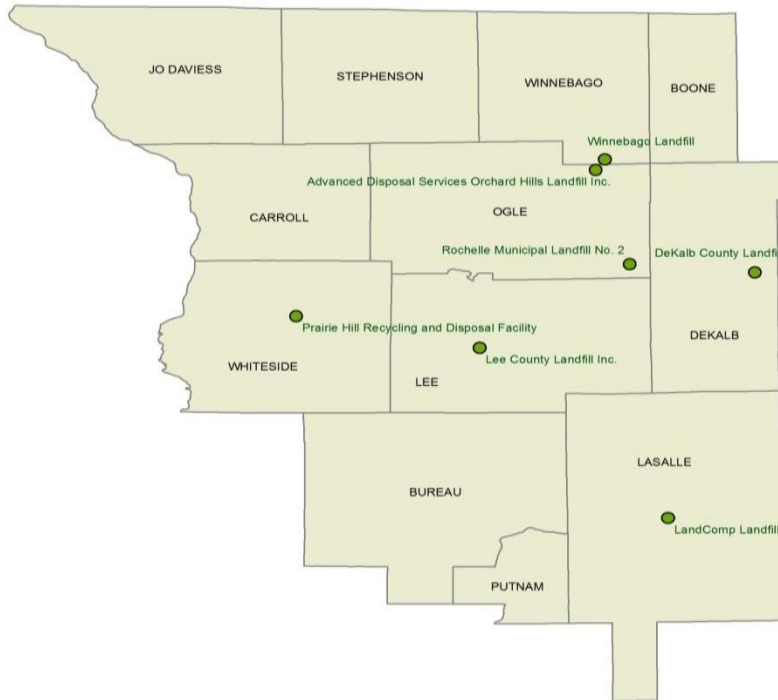

## Landfill Capacity and Disposal Volume by Region

The Illinois EPA divides the state into seven administrative regions. These regions have different landfill populations, disposal rates, landfill capacities, and resulting landfill life expectancies. The table below identifies this information on a regional basis.
