1. "Illinois EPA Total Maximum Daily Load - Rend Lake Watershed" prepared by CDM Smith, 2014
2. USEPA PLOAD Version 3.0 User's Manual dated January 2001

3.. USGS Fact Sheet FS-195-97: "Unit-Area Loads of Suspended Sediment, Suspended Solid, And Total Phosphorus From Small Watersheds in Wisconsin" prepared by Corsi, Graczik, Owens, and Bannerman

Methodology:

Rend Lake Watershed is predominantly pasture and forest. (Reference 1, pg. 2-1)
Therefore, the export coefficient method described on Page 3 of Reference 2 is used to calculate median total phosphorus loads.
The minimum and maximum phosphorus loads are calculated using the procedure described in "Estimating Loads" section of Reference 3.

1. Calculate Median Total Phosphorus Load

Assumptions:
Export coefficients per land use (lb/ac/yr) are given in Appendix IV of Reference 2. The export coeffients for the Wisconsin area located in Appendix IV are most appropriate for the Rend Lake watershed due to similar climate characteristics, coefficient ranges from other regions listed in the referencematerial were included as needed. The land use distribution for Rend Lake watershed is provided in the Stage 1 TMDL report. Export coeficients were assumed for the Rend Lake Land Use categories that are not listed in the Wisconsin categories.

Rend Lake Watershed Information		**Total Phosphorus Export Coefficients**		**Phosphorus Loads**

*Export coefficient valuus listed in Appendix IV are MEDIAN values. The ranges for each land use are assumed.

Results:

The export coefficient values lised in Appendix IV of Reference 2 are median values. Therefore, the range calculated with this method is a range for the median, rather than a range between the minimum and maximum loads. The results show that the Rend Lake watershed median Phosphorus load ranges between 116,500 and 157,000 lb/yr.

*Export coefficient valuus listed in Appendix IV are MEDIAN values. The ranges for each land use are assumed.

Results:

The export coefficient values lised in Appendix IV of Reference 2 are median values. Therefore, the range calculated with this method is a range for the median, rather than a range between the minimum and maximum loads. The results show that the Ashley Lake watershed median Phosphorus load ranges between 547 and 588 lb/yr.

Client:	Illinois EPA	Computed By:	Brian Bennett
Project:	TMDL Rend Lake (Benton Reservoir)	Date:	12/5/2014
Calculations:	Total Phosphorus Loads	Page No.	

References:

1. "Illinois EPA Total Maximum Daily Load - Rend Lake Watershed" prepared by CDM Smith, 2014
2. USEPA PLOAD Version 3.0 User's Manual dated January 2001
3. USGS Fact Sheet FS-195-97: "Unit-Area Loads of Suspended Sediment, Suspended Solid, And Total Phosphorus From Small Watersheds in Wisconsin" prepared by Corsi, Graczik, Owens, and Bannerman

Methodology:

Benton Lake Watershed is predominantly agriculture and forest. (Reference 1, pg. 2-1)
Therefore, the export coefficient method described on Page 3 of Reference 2 is used to calculate median total phosphorus loads.
The minimum and maximum phosphorus loads are calculated using the procedure described in "Estimating Loads" section of Reference 3.

1. Calculate Median Total Phosphorus Load

Assumptions:
Export coefficients per land use (lb/ac/yr) are given in Appendix IV of Reference 2. The export coefficients for the Wisconsin area located in Appendix IV are most appropriate for the Benton Lake watershed due to similar climate characteristics, coefficient ranges from other regions listed in the reference material were included as needed. The land use distribution for the watershed is provided in the Stage 1 TMDL report. Export coefficients were assumed for the Land Use categories that are not listed in the Wisconsin categories.

Rend Lake Watershed Information		**Total Phosphorus Export Coefficients**		**Phosphorus Loads**

TOTAL	**1,555**			**842**	**697**	**769**

*Export coefficient valuus listed in Appendix IV are MEDIAN values. The ranges for each land use are assumed.

Results:

The export coefficient values listed in Appendix IV of Reference 2 are median values. Therefore, the range calculated with this method is a range for the median, rather than a range between the minimum and maximum loads. The results show that the Benton Lake watershed median Phosphorus load ranges between 697 and 842 lb/yr.

Trib Name	Trib Area (acres)	Percent of Total	Trib Flow (mil m^3/yr)	Trib Concentration (lbs/yr)	Trib Concentration (ug/L)

Responsiveness Summary

Responsiveness Summary

Rend Lake Watershed Total Maximum Daily Load

The responsiveness summary responds to any questions and comments received during the public comment period from February 9, 2017, through April 6, 2017.

What is a TMDL?

A Total Maximum Daily Load (TMDL) is the sum of the allowable amount of a pollutant that a water body can receive from all contributing sources and still meet water quality standards or designated uses. The Waverly Lake watershed TMDL report contains a plan detailing the actions necessary to reduce pollutant loads to the impaired water bodies and ensure compliance with applicable water quality standards. The Illinois EPA implements the TMDL program in accordance with Section 303(d) of the federal Clean Water Act and regulations thereunder.

Background

The watershed targeted for TMDL development is Rend Lake, located mostly in Jefferson, Franklin, and Washington counties. The Rend Lake watershed encompasses an area of approximately 311,140 acres (486 square miles). Land use in the watershed is predominately agriculture.

The Clean Water Act and USEPA regulations require that states develop TMDLs for waters on the Section 303(d) List. Illinois EPA is currently developing TMDLs for pollutants that have numeric water quality standards. Therefore, TMDLs were developed for three lakes and three stream segments listed as impaired according to the *Illinois Integrated Water Quality Report and Section 303(d) List-2016*. The lakes include Rend Lake (RNB): total phosphorus; Lake Benton (RNO): total phosphorus, and Ashley Reservoir (RNZB): total phosphorus, dissolved oxygen. Stream segments include Big Muddy River (N-08): pH; Gun Creek (NI-01): Iron; Casey Fork (NJ-07): fecal coliform.

In addition, a Load Reduction Strategy (LRS) was developed for pollutants that do not have numeric water quality standards. These include Big Muddy River (N-08): total phosphorus, sedimentation/siltation; Snow Creek: total suspended solids (TSS); and Rend Lake: TSS.

Illinois EPA contracted with CDM Smith (TMDL Consultant) to prepare the TMDL report for the Rend Lake Watershed.

Public Meetings

The Stage One public meeting was held on March 24, 2014 at the Rolland W. Lewis Community Building in Mt. Vernon and the Stage 3 public meeting was held on March 6, 2017 at the Rend Lake Golf Course Banquet Meeting Room in Whittington, IL. Illinois EPA provided public notice for both meetings by placing display ads in the Benton Evening News. In addition, a direct mailing was sent to approximately 56 stakeholders/permittees in the watershed. These notices gave the date, time, location,

and purpose of the meeting. The notice also provided references on how to obtain additional information about this specific site, the TMDL program, and other related information. The draft TMDL report was available for review at the Mt. Vernon City Hall and the Rend Lake Conservancy District, and also on the Agency's webpage at www.epa.state.il.us/public-notices.

The Stage 3 public meeting started at 3:00 p.m. on Monday, March 6, 2017. It was attended by approximately 26 people and concluded at 5:00 p.m., with the meeting record remaining open until midnight, April 6, 2017.

Questions & Comments

1. Many of the recommended practices did not follow USDA-NRCS's long-established and proven methods of conservation. We would like to recommend that NRCS standards be referred to and used.

   Response: NRCS practice standards for Illinois are now referenced in the Final Report.

2. Practices such as cover crops, diversions, stream crossings, and sediment basins, field borders, terraces and WASCOBs would be beneficial to achieving the goals but have been left out.

   Response: These practices have been included in the Implementation Plan section of the Final Report.

3. It seems that Grade Stabilization Structures are being recommended only in wooded areas or areas that are on a creek. This is an inaccurate assumption. The report also talks about how pipe structures are preferred where vegetation cannot be established on most of the backslope. That is not an accurate statement. It is always best to grow vegetation on the berms to avoid erosion and possibly breaching the structure. Seeding mixes should always be matched to the specific site conditions in order to achieve some vegetation. Pipe structures can be used in upland or bottomland situations. They are not exclusive to wooded areas and do not have to be at a creek.

   Response: The discussion on Grade Stabilization Structures has been updated in the Final Report and includes information from NRCS Conservation Practice Standard 410.

4. Using Grassed waterways as a turn area can result in damage to the vegetation. Using these as turn areas or field lanes are not recommended. They should not be crossed when wet. NRCS approves seed mixes for vegetating grassed waterways. NRCS does not have any approval authority over the actual seed. Fertilizing grassed waterways after establishment is not necessary unless there is a proven to be lacking proper nutrients. Vegetation will likely capture plenty of nutrients from runoff.

Response: This information has been included in the discussion on Grassed Waterways in the Final Report.

5. Diversions, Side Inlet Structures, conversion to Hayland, Critical Area Plantings, are among the list of conservation practices that are unmentioned but could also be used to reduce erosion and phosphorus loss.

   Response: These were not addressed in the Final Report. We agree that these practices can reduce erosion and phosphorus, however, the implementation plan is not an exhaustive list of all potential BMPs. Landowners and growers can decide which practices best fit their operation.

6. When talking about the costs of practices, there is sometimes a difference in how much something will actually cost and how much a program will pay to apply a practice. The report seems to insinuate that they are one and the same.

   Response: The Final Report has been updated to differentiate between actual costs and cost-share assistance for state and federal programs.

7. The Partners for Conservation (PFC) program, previously known as Conservation Practices Program (CPP) is a program that is administered by the SWCDs with IDA funds. It is not a 10 year program. Some practices have a 10 year life/maintenance contract. Some practices only have a 1 year maintenance (like No-till). The list of practices that can be cost shared on also include Cover Crops, Temporary Cover (if added to another practice in order to extend the construction season), Mulch-Till, Filter Strips, Rain Gardens, Well Decommissioning, and Nutrient Management Plans. There is not a project cap of $5,000 per landowner. Although, each SWCD can add restrictions to the funds to make them go farther. We are not aware of any SWCD in the Rend Lake Watershed that has added a $5,000 cap per landowner to their funds.

   Response: The Final Report has been updated to include the BMPs mentioned and has removed the reference to the landowner cap for the PFC program.

8. Urban construction is not mentioned as a possible source of TSS. The City of Mt. Vernon is growing and there is always construction that is occurring. Many of the sites are permitted through the Storm water (ILR10) NPDES permits. The permitted ones within Jefferson County are inspected by the SWCD, as we have a Certified Professional in Erosion and Sediment Control on staff. Even with our oversite, there is negligence or just large rain events that occur and result in sediment loads to the creek and storm system. There are many construction projects, just under the required permit size, that contribute large sediment loads to the watershed. The City of Mt. Vernon is not an MS4 and therefore does not have a storm water inspection program on the projects within the city limits.

   Response: Even though Urban areas constitute less than 10% of the land use in the Rend Lake watershed, the implementation plan has been

updated to address the impacts of urban stormwater, including construction. The Urban Stormwater Manual is referenced as well.

9. We appreciate that the plan allows for voluntary implementation of practices and feel that is the best way to approach the agriculture community in the watershed.

   Response: The Agency is ready to work with stakeholders/landowners in the watershed to address nonpoint source pollution.

10. The IEPA needs to improve its public communication about meetings such as this one. The public notices should be is several newspapers. I found a notice in the Benton newspaper. I took the notice to the Centralia Sentinel which ran an item about this meeting. When I visited the Mt. Vernon Register News, they chose not to run anything. Has the IEPA considered communicating with the various soil conservation and water districts within this project's area? Perhaps there would be better communication from these offices. The public has the right to know about these projects.

    Response: We agree that the public has the right to know about these projects. The Agency partners with the Illinois Press Association, who decides which local papers run the public notices. The public notice and draft report was posted on the Agency's website thirty days before the public meeting. In addition, the public notice was mailed 30 days prior to the public meeting to 56 stakeholders in the Rend Lake watershed. These organizations included municipalities, county Soil and Water Conservation Districts, University Extension, county Farm Bureaus, county Public Health Departments, and NPDES permit holders, among others. In addition, Illinois EPA staff met and communicated with the Jefferson County Soil and Water Conservation District throughout the project.

NOTICE OF PUBLIC MEETING

Rend Lake Watershed
(Jefferson, Franklin, Washington, and Marion Counties)

The Illinois Environmental Protection Agency (IEPA) Bureau of Water will hold a public meeting on

Monday, March 24, 2014 (4:00 pm)

at the

Veterans Park
Rolland W. Lewis Community Building
800 South 27th Street
Mt. Vernon, Illinois

The purpose of this meeting is to provide an opportunity for the public to receive information and comment on the draft Total Maximum Daily Load (TMDL) concerning impairments to 8 water body segments within the Rend Lake Watershed. The segments and potential causes of impairment are: Big Muddy River (Manganese, Dissolved Oxygen, pH), Gun Creek (Iron, Dissolved Oxygen, Manganese), Casey Fork (Dissolved Oxygen, Fecal Coliform), Snow Creek (Dissolved Oxygen), Rend Lake (Total Phosphorus, Manganese), Lake Benton (Total Phosphorus), Lake Jaycee (Total Phosphorus), and Ashley Reservoir (Dissolved Oxygen, Total Phosphorus).

This report includes watershed characterization, data analysis and selection of potential models that will be used to determine the pollutant loading capacity and reductions necessary to meet designated uses and water quality standards.

The IEPA implements the TMDL program in accordance with Section 303(d) of the federal Clean Water Act. A TMDL is the sum of the allowable amounts of a single pollutant (phosphorus, metals, etc.) that a waterbody can receive from all contributing sources and still meet water quality standards or designated uses.

Stakeholders and participants will also be asked for input and ideas to be applied to the draft Stage 1 report. An additional public meeting will be held in the future to discuss the next stage of the TMDL.

The draft stage one report for the Rend Lake Watershed will be available on-line at www.epa.state.il.us/public-notices. A hard copy of the draft report will be available for viewing at the Mt. Vernon Park District or Mr. Vernon City Hall during business hours. Questions about the TMDL should be directed to the project manager, Trevor Sample by phone at 217-782-3362 or email Trevor.Sample@illinois.gov or contact Abel Haile (see contact information below).

Closure of the Meeting Record

The meeting record will close as of midnight, April 23, 2014. Written comments need not be notarized but must be postmarked before midnight and mailed to:

Abel Haile, Manager, Planning (TMDL) Unit
Watershed Management Section, Bureau of Water
Illinois Environmental Protection Agency
1021 North Grand Avenue East
P. O. Box 19276
Springfield, IL 62794-9276
Phone 217-782-3362

TDD (Hearing impaired) 217-782-9143
E-mail: Abel.Haile@illinois.gov
Fax: 217-785-1225

NOTICE OF PUBLIC MEETING

Rend Lake Watershed
(Jefferson, Franklin, Washington, and Marion Counties)

The Illinois Environmental Protection Agency (IEPA) Bureau of Water will hold a public meeting on

Monday, March 6, 2017 (3:00 pm)

at the

Rend Lake Golf Course Banquet Meeting Room
12476 Golf Course Road
Whittington, Illinois

The purpose of this meeting is to provide an opportunity for the public to receive information and comment on the draft Total Maximum Daily Load (TMDL) concerning impairments to 7 watebody segments within the Rend Lake Watershed. The segments and potential causes of impairment are: Big Muddy River (Dissolved Oxygen*), Gun Creek (Iron, Dissolved Oxygen*), Casey Fork (Dissolved Oxygen*, Fecal Coliform), Snow Creek (Dissolved Oxygen*), Rend Lake (Total Phosphorus), Lake Benton (Total Phosphorus), and Ashley Reservoir (Dissolved Oxygen*, Total Phosphorus). In addition Load Reduction Strategy (LRS) has been developed for Total Suspended Solids and Sedimentation/Siltation.

This report includes watershed characterization, data analysis, pollutant loading capacity analysis, LRS, and an implementation plan that have been used to determine the reductions necessary to meet designated uses and water quality standards.

*No TMDL developed for this parameter

The IEPA implements the TMDL program in accordance with Section 303(d) of the federal Clean Water Act. A TMDL is the sum of the allowable amounts of a single pollutant (such us total phosphorus, metals, etc.) that a waterbody can receive from all contributing sources and still meet water quality standards or designated uses.

Stakeholders and participants will also be asked for input on potential Section 319 nonpoint source Best Management Practice projects that could be included as part of the implementation plan in the final draft Stage 3 report. The draft Stage 3 report for Rend Lake Watershed will be available on-line at www.epa.state.il.us/public-notices. A hard copy of the draft report will be available for viewing at Mt. Vernon City Hall and Rend Lake Conservancy District during business hours.

Questions about the TMDL should be directed to the project manager, Trevor Sample by phone at 217-782-3362 or email Trevor.Sample@illinois.gov or contact Abel Haile (see contact information below).

Closure of the Meeting Record

The meeting record will close as of midnight, April 6, 2017. Written comments need not be notarized but must be postmarked before midnight and mailed to:
