

Appendix A-7. 2018 Illinois Waters in Category 4C (Impairment not caused by pollutants)

For the following waters it has been determined that impairment is not caused by a pollutant, but instead is caused by other types of pollution (i.e., habitat related conditions). In each of these cases, water data was available and revealed no violation of an Illinois Water Quality Standard caused by pollutants. In addition, a review of permits, watershed information and other source data indicated no potential pollutant impairments. Furthermore, in each of these waters, the reason for the impairment is explained by the presence of degraded habitat or other non-pollutant causes.
