2017 Provider-Level Data

Data Dictionary

The Provider data for services performed during calendar year 2017. Claims adjudicated through May 17, 2019

The Provider-Level data describes many different attributes of HFS Medical Program providers. There are approximately 100,000 rows in the data, each describing a single provider. Providers include those from medical sciences, allied health, social services, and support services fields that have been reimbursed for services provided to program recipients in respective calendar years. Providers can be located in and out of the state of Illinois. Information included on a provider’s location may not include all locations where they conduct medical practice, but will typically reflect a primary location. For Capitations or Non-Fee for Service payments, only information on the amounts paid by HFS to the Prepaid health plans is currently available.

The file complies with Illinois Transparency legislation, which mandates that HFS program data is accessible to the public. HFS must also provide names and locations of providers along with any monetary disbursements made to them by HFS. In compliance with HIPAA requirements to preserve patient privacy, HFS has excluded recipient names, NPI, zip code, and any other identifying data from providers who served less than six Medicaid recipients in that calendar year.

The costs shown reflect the costs for claims adjudicated through the data shown at the top of this page. A claim is considered adjudicated when HFS has determined that it is ready for payment and passed to the Comptroller. A few claims that ultimately may have been paid late during the next year may not have been adjudicated by the above date.
