**DoIT Staff Gathers for Town Hall Meeting**

DoIT's first Town Hall Meeting of 2017 was held this week and served as an excellent forum to both share and gather information. Members of the leadership team provided details on our new agency's journey, gave a progress update and discussed upcoming initiatives, cybersecurity strategies and the new DoIT employee recognition program. The meeting concluded with Q&As on a variety of topics with questions submitted via email, from the audience and those submitted live during the town hall meeting. The video and presentation slides can be [viewed here](#).

**Illinois' ERP Implementation in the News**

Our ERP team received national attention this week with an article in [CIO Review](#) that explored the journey and process to achieve the first ever pilot ERP Go Live on October 1, 2016. Much progress is being made on future implementations and the next phase is scheduled to begin on April 1, 2017.

**Best Practices for Application Development Standards**

DoIT's Applications and Security divisions are collaborating with a cross-agency group to review development coding guidelines. A pilot group formed security standards and development guidelines for .NET applications. The focus is on best practices in application development for building secure, high-performance applications. Interested staff can review the preliminary documents at the [application development portal](#) and more information will be coming soon on community forums.

**DoIT FYIs & Reminders**

**Password Self-Service**

Self-service password resets are now easier! DoIT's Customer Service Center listened to your feedback and made the process of resetting passwords even faster through Forefront Identity Manager (FIM)- see if you can break the 33 second registration record! To utilize this updated process, please register [by clicking here](#) and encourage staff at your agencies to also register, as this is a big component of our help desk calls. Thanks for your support!
