

2.3.C.9 Clock Adjustment

The system has a built-in system clock for a time-display and other time-related functions. An Attendant can make adjustment of the seconds to 0 second.

■ Condition

- Confirmation Tone is connected when adjustment is complete.
- Adjusted time of day is immediately displayed on ATTND display.
- The time of day is adjusted by depressing the ADJUST key twice.
- The adjustment is executed in the manner described below.
 - If an Attendant adjusts system-clock while second is between 0 to 29, the value of second is revised to 0.
 - If an Attendant adjusts system-clock while second is between 30 to 59, the value of second is revised to 0 and minute increases by 1.
- This function is for time, minutes and second adjustment, and not for date.
- If there is no Attendant, the KT/VP user with station No. 20 can adjust the system-clock. (See Section 2.3.P.7.4 Programming from KT/VP.)
