- Valid Value tab provides information about acceptable values
- Population Restriction tab provides information about error messages sent for invalid values submitted
- Sequencing tab provides sequencing, or order MTCs needs to be filed in

#### Section 1 – Code values that are 'Not Statutorily Valid' (Code values that are grayed out):

The jurisdiction should communicate in this section the code values that are not statutorily valid in the jurisdiction. A 'N' in the capture column indicates that the data element is not captured in the jurisdiction. A 'Y' in the capture column indicates that the data element is captured in the jurisdiction. A code value that has been grayed out indicates that the code is 'Not Statutorily Valid' in the jurisdiction. Jurisdictions may return Error Message-'042-Not Statutorily Valid' on grayed out values. The code values that are not grayed out are the code values that are statutorily valid and will be processed in the jurisdiction. See Section 2 (below) for Statutorily valid codes that are valid but will not be processed by jurisdiction.
