NARRATIVE STATEMENT:

(Provide a detailed summary of system operations for a modified 9-1-1 plan. Also, if incorporating an NG9-1-1 solution, please include the additional items listed below pursuant to 1325.205 b)12).

1) Indicate the name of the certified 9-1-1 system provider being utilized.
2) Explain the national standards, protocols and/or operating measures that will be followed.
3) Explain what measures have been taken to create a robust, reliable and diverse/redundant network and whether other 9-1-1 Authorities will be sharing the equipment.
4) Explain how the existing 9-1-1 traditional legacy wireline, wireless and VoIP network, along with the databases, will interface and/or be transitioned into the NG9-1-1 system.
5) Explain how split exchanges will be handled.
6) Explain how the databases will be maintained and how address errors will be corrected and updated on a continuing basis.
7) Explain who will be responsible for updating and maintaining the data, at a minimum on a daily basis Monday through Friday.
8) Explain what security measures will be placed on the IP 9-1-1 network and equipment to safeguard it from malicious attacks or threats to the system operation and what level of confidentiality will be placed on the system in order to keep unauthorized individuals from accessing it.

Plan Narrative:

Mercer County is currently utilizing Frontier Communications as their 9-1-1 Service Provider. Mercer County will be switching from Frontier communications to Genesee Communications as their 9-1-1 Service Provider. Genesee Communications will be providing two redundant ESRP's that are capable of providing IP based (Next Generation) 9-1-1 selective routing and call delivery which are located in Genesee Central Office and Cambridge Central Office. Their are Legacy Network Gateways (LNG)'s that are located at each ESRP site for carriers to connect their trunks for carrying 9-1-1 traffic to Mercer County. The 9-1-1 network will be based from Genesee ESRP's to PSAP and is fully redundant 9-1-1 traffic to Mercer County. The network will be based from Genesee ESRP's to PSAP and is fully redundant Mercer County will be transferring their 9-1-1 database from Frontier to Genesee Communications, Genesee Communications will also provide 9-1-1 database Processing services. Wireless and VOIP calls will continue to use 3rd party database providers for location information as they do today.

Mercer County has also purchased a hosted Customer Premise Equipment solution from INdigital. The hosted controller is located in Genesee Central Office. There will be 9-1-1 call taking positions that work of controller located at the PSAP. The backup for the controller is an INdigital MEVO server that is located in the Cambridge Central Office, with MEVO phones located at the PSAP. Other counties in the area may use the hosted controller.

The new network follows NENA 13 standards and protocols with exception of geospatial call routing call routing which is still under development with the industry. Once the geospatial call routing available, this service will be utilized as well.

The network meets the FCC diversity and redundancy requirements for 9-1-1. The network is diverse and redundant between ESRP's and PSAP.

Genesee Communications has notified and requested that all carriers install new SS7 or ISP trunks to each LNG/ESRP. The carriers have all provided TN loads and are providing daily updates to INdigital for the new 9-1-1 database. The new database service will be converted at time of cut over. Genesee Communications is holding regular project calls with carriers to coordinate the installation of the new trunks and the development of the new database. There will be call through testing prior to cut over that
Plan Narrative:

meets and exceeds the ISP testing requirements. Test numbers will be established for call through testing prior to cut over. The cut over will be coordinated with each carrier and tested to confirm to confirm everything is working properly.

9-1-1 calls will be routed either of two ESRP, a based on how the carriers set their call flow up from their switches. Cells will be routed to the appropriate PSAP just as they are today, their will be no changes to how split exchanges are routed.

Currently, Mercer County transfers calls to other counties via 10-digit administrative lines and by network circuits. Call transfers will be performed the same way they are currently, unless the neighboring 9-1-1 system is utilizing the same router, where then the call can be passed through the 9-1-1 router to the appropriate system’s 9-1-1 position, where they will have data along with the caller.

The IP network that will be used to deliver 9-1-1 calls to calls to the PSAP is private. There is no outside access. Administrative and maintenance access to equipment is password protected.

Mercer County will also be switching from the Monmouth Police Office in Warren County as their backup to Geneseo Police Department, located in Geneseo, IL and part of the Henry County ES11 System.

TEST PLAN DESCRIPTION

1. Description of test plan
   Test calls will be made for each carrier either prior to or during the cutover to ensure calls are routing correctly and that the proper ANI is being displayed at the PSAP. The wireline carriers will test from each exchange to make sure calls are routing to correct PSAP with proper ANI. Wireless and VOIP will test and ensure correct ANI/PHASE II and Coordinates are correctly displayed.
